

QUANTUM COLLAGE

BY OHM-G

The newest **instrument** to create *surprising*, fresh and **never heard-before** music is the **legacy** of the world's existing **music** library.

Imagine playing this music as an instrument. Well known voices, singing in a **totally different context**. Higer, lower, faster, slower...

QUANTUM COLLAGE was born at Ohm-G's studio in 2012 in Ibiza. The idea behind the project was to create music journeys with no limits of styles with organic transitions, based on his own creations.

The multi-instrumentalist Ohm-G recycles samples into his mixes in a very unique way, he enters new structures of parallel rhythms, merging different styles to create a new one he calls: Quantum Collage.

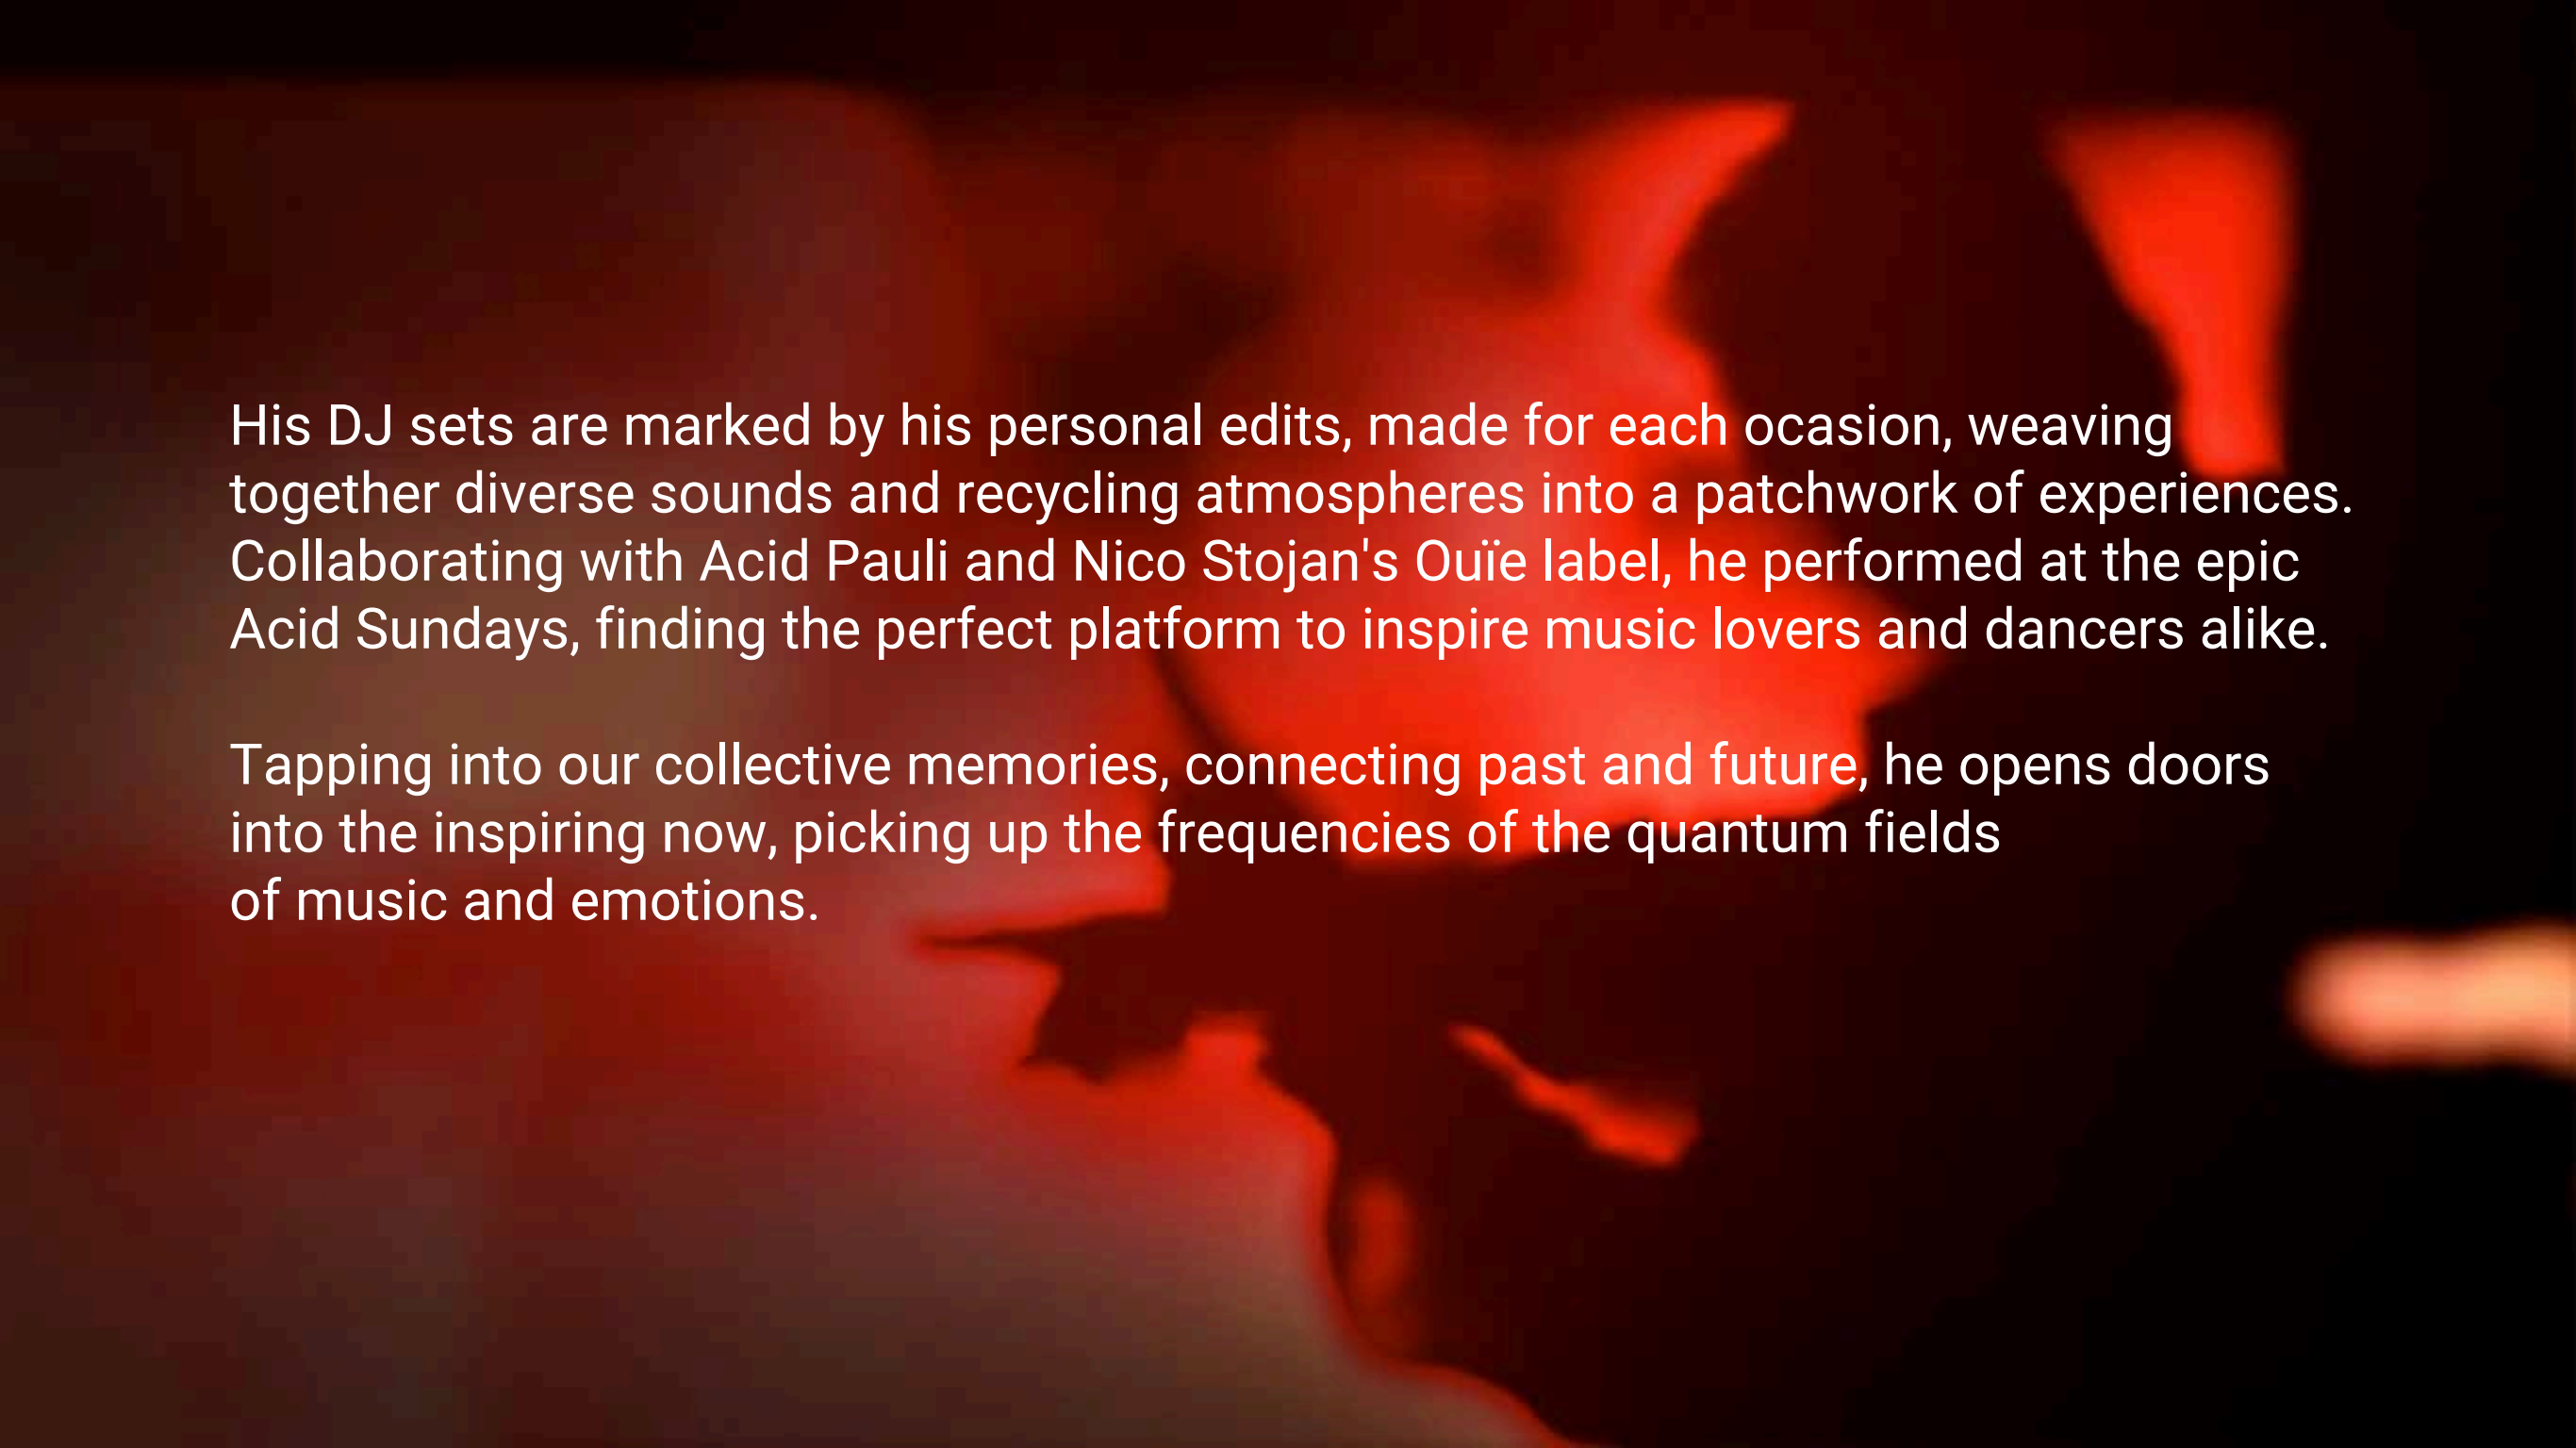

Between abstract and concrete, particles and waves, not fulfilling the expectations of the conditioned mind, open up for the beauty of asymmetry, not knowing when something begins or ends, with the knowledge of treating the frequency in a harmonic unexpected musical way.

About Ohm-G

Olaf Gutbrod, a.k.a. Ohm-G, is the visionary creator of Quantum Collage. Originally from southern Germany, his musical journey began with his first guitar at nine years old and has taken him worldwide, composing for various mediums (theatre, movies, art performances) and exploring global cultures, including the recording of the Spiritual Voices CD sample that led him to Africa and India, before finding his spiritual home in Ibiza in 2002, where he became a prominent figure in the chill-out scene.

Producing numerous tracks featured on the iconic Cafe del Mar and Hotel Costes CDs, for several years he held down a DJ residency at Atzarò Ibiza and developed their music and CD compilations.

His DJ sets are marked by his personal edits, made for each occasion, weaving together diverse sounds and recycling atmospheres into a patchwork of experiences. Collaborating with Acid Pauli and Nico Stojan's Ouïe label, he performed at the epic Acid Sundays, finding the perfect platform to inspire music lovers and dancers alike.

Tapping into our collective memories, connecting past and future, he opens doors into the inspiring now, picking up the frequencies of the quantum fields of music and emotions.

After the last ten years composing at the studio, we are currently looking for the ideal venue to bring QUANTUM COLLAGE alive and share all these new music with the world.
